Sure-Seal[®]

Low cost, high reliability

A one-piece resilient body and rugged multiple moisture seals make Sure-Seal® connectors a natural for applications where outside contaminants must be excluded. Sure-Seal® is reliable and uncomplicated. Only two parts are required to complete a connector: the connector body, and the contacts. Sure-Seal® was developed to address Department of Transportation safety regulations for connectors used in automobiles. Since then, Sure-Seal[®] has been successfully used in a broad range of environmental applications where a small, low cost connector is needed. These sealed connectors meet or exceed DOT requirements for shock, vibration, temperature cycling, salt water spray and immersion, petroleum derivatives, industrial gas, all the while insuring low milli-volt drop and low contact resistance. Existing applications include motorcycles, automobiles, boats, and a wide range of demanding off-road vehicle uses. Sure-Seal® will operate in temperatures from -40°F to +221°F under conditions of high humidity, severe vibration, ice and mud. Sealing integrity is maintained with exposure to brake fluid, gasoline, diesel fuel, anti-freeze, ultraviolet, ozone, and steam.

Applications Wet, humid, or dirty environments requiring a low cost, small and reliable sealed connector

- Automotive Trucks and Buses Marine
 - Off-road Vehicles
- Appliances
- Industrial Machinery

Features

Low Installed Cost

One piece molded bodies and crimp contacts provide a low cost solution. In addition, these connectors can be easily terminated by the user.

Water Submersible

Not just splash-proof, but truly submersible for short periods of time. Sure-Seal® will seal to the requirements of IP67 and DIN 400 50.

Resistant to Automotive/Industrial Environments

Sure-Seal[®] will operate in temperatures from -40°F to +221°F under conditions of high humidity, severe vibration, ice and mud. Sealing integrity is maintained with exposure to brake fluid, gasoline, diesel fuel, antifreeze, ultraviolet, ozone, and steam.

Wide Range of Wire Gauges and **Current Carrying Capability**

Up to 85 amps with wire gauges from size 20 up to size 4 AWG wire.

One-Piece Connector

Sure-Seal® has a simple one-piece molded body. No other parts (other than contacts)

are required. Bodies mate using multiple resilient seals and will remain mated even under severe vibration and shock.

Field Serviceable

The use of removable crimp contacts allows Sure-Seal® connections to be changed or modified in the field if necessary.

Polarized Against Mis-mates

Connector halves use both pin and socket contacts. The plug and receptacle must be properly oriented for the connectors to mate. Raised indexing ribs in conjunction with a stepped plane allow blind mating of the connector halves even in dark or cramped spaces.

Three Sure-Seal® Versions

Sure-Seal[®] is available in three versions. The basic Sure-Seal[®] line is the broadest and ideal for most applications. Mini-Sure-Seal® provides a slightly smaller connector in a limited range of configurations. Power Sure-Seal[®] is for single circuit, high power applications.

Technical Specifications

MATERIALS & FINISHES

Body

(Complete test data available on **bage 26**.)

Contacts	Copper alloy
Plating	Tin standard; gold plating optional
ELECTRICAL DATA	
Operating Voltage	400 Vac maximum
Dielectric Withstanding Voltage	1,200 Vac at sea level
Current rating	15 Amps (Sure-Seal®)
	8 Amps (Mini Sure-Seal®)
	85 Amps (Power Sure-Seal®) Insulator
Wire Range Sizes	14 - 18 AWG (Sure-Seal®)
	18 - 20 AWG (Mini Sure-Seal®)
	4 - 10 AWG (Power Sure-Seal®)
Contact Resistance	10 Milliohms maximum
Insulation Resistance	100 Megohms (minimum)
MECHANICAL Operating Temperature	-40°F to +221°F (-40°C to +105°C)
Sealing	≈IP67, DIN 400 50, 3 foot depth in 5% salt solution
	24 hours min. ≈NEMA 6 p
Wire Sealing Range	See column 8 on contact chart, page 17
Insulation Strip Lengths	See column 7 on contact chart, page 16
Mating Life	50 cycles minimum (stamped & formed) 100 cycles (machined
Salt Spray	To MIL-STD-202D Method 101D
Heat	+221°F (+105°C) for 1000 hours (See test data page 26)
Weather, Ozone, & Ultraviolet	In accordance with ASM D-1149 (100pphm) $\&$
	ASTM D-1171 (outdoor exposure)
Vibration	5 to 55 Hz .06" DA 1 hour; radial & longitudinal axes
Shock	50g 11ms, 30 cycles; radial & longitudinal axes
Contact Type	Crimp: using hand or semi-automatic tooling
Number of Circuits	1 to 10
Contact Insertion	From rear with simple hand tool or simultaneous insertion of multiple contacts with semi-automatic

7.5 lbs. (35N) minimum

		* See page 22 for	special rectangular version	Mounting Ding	** Use Mount	ing Rings ₍₂₎ <u>page 20</u>

(1) Boot

Fits over the rear of the connector and seals the jacket of the cable. It also provides additional strain relief and abrasion resistance. See dimensions on page 20 for choosing 3 or 4 circuit boot.

(2) Mounting Ring

A Mounting Ring snaps into an appropriate sized hole in a panel or bracket and allows a non-flanged plug or receptacle to be panel mounted.

(3) Mounting Plate

Metal mounting plates reinforce the molded flanges when attaching flanged connectors to a panel.

(4) Mounting Clip

Mounting clips can be used free-hanging as a positive lock to provide a secondary means of securing the connector halves. Mated connector pairs can be snapped into the clip for fixed mounting using a screw or cable tie. The wires of one of the connectors can be passed through an integral retention ring which captivates one of the connector halves to the clip.

(5) Wire Hole Fillers

Wire Hole fillers are inserted into unused cavities in place of a contact. Hole fillers are required to retain the watertight sealing if less than a full compliment of contacts are to be used.

(6) Holding Block

A holding block makes insertion of contacts into the molded body faster and avoids personal injury or damage to the connector. It is highly recommended that the appropriate block be used when inserting contacts. (See Assembly Instructions, page 25)

** VE can be used with ITT CANNON VE connectors and Deutsch HD connectors. NOTE: Sure-Seal[®] and Mini Sure-Seal[®] contacts are available in machined contact versions. Call for information. Power Sure-Seal[®] contacts are machined contacts.

(1) Loose Piece or 5K Reel

Contacts are available loose piece or on continuous reels of 5,000 pieces for use with semi-automated crimping systems.

(2) Wire Hole Fillers

These fillers are inserted into unused cavities in place of a contact. Wire hole fillers are required to retain the watertight sealing if less than a full compliment of contacts are to be used.

(3) Insertion Tool

An insertion tool is required to insert contacts into the connector. These tools are heavy duty production hand tools. A holding block should also be used during the insertion process. An extraction tool is not required. See assembly instructions. A semi-automatic insertion tool is available. See 늘 page 25.

▲ IMPORTANT: Use holding blocks on page 15.

Power insertion tool available, see page 25.

(4) Hand Crimp Tools

These are heavy duty tools with a ratchet mechanism that will only release the contact when the crimp is completed. These tools produce consistent, high quality crimps. They are the only hand crimping tools recommended for Sure-Seal[®] contacts.

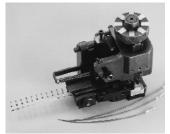

(5) Semi-Automatic Crimp Tools

For high volume applications, several types of semi-automatic crimping tools are available for all Sure-Seal® contacts. See **pages 23** and **24**.

Mini Applicator for insulation support

For Sure-Seal® stamped contacts

Mini applicator modules are used in industry standard crimp presses. This allows for fast changeover for crimping different contacts and by using the same crimp press, saves valuable factory floor space versus having to use multiple presses.

+ May be used to cover industry standard BNC crimp style plugs. Call for more info.

See **page 14** for matching plugs and receptacles chart.

Mounting Ring

A Mounting Ring snaps into an appropriate sized hole in a panel or bracket and allows a non-flanged plug or receptacle to be panel mounted.

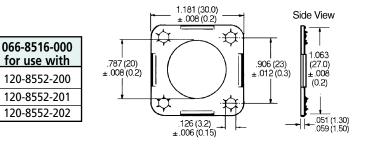

Part Number	A Dia. Max.	B Dia. Max.	C Dia. Max.	F Max.	H Ref.	L Max.	Hole Diameter	Panel Thickness

Sure-Seal®

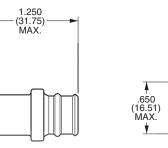

Special Products

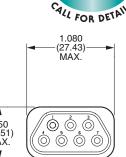

Rectangular Sure-Seal® Connector

 Part Number

 120-1873-007

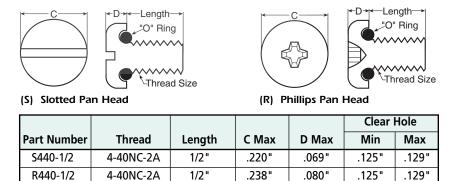

Accessories

Sealing Screws

Sealing screws are designed with a groove underneath the head to incorporate an O-ring. When tightened, the O-ring is compressed against the connector flange to form an air, water, and gas-tight seal. Sealing screws are used in conjunction with the nut plates below.

Nut Plates

22

Nut plates should be used in conjunction with mounting plates. Nut plates eliminate the need for loose nuts which are often difficult to negotiate in confined areas. As well, they effectively distribute the screw tension across the back of the panel. The bracket is aluminum alloy with Alodine plating, and the nuts are steel alloy plated cadmium. Nut plates mate with above sealing screws.

Assembly Instructions

Wire and Jacketed Cable Preparation

Strip wires to appropriate length (See contact chart on **page 16** for strip lengths). If using a boot, strip jacket so no more than listed dimension is exposed when contact is full inserted.

Note: Try stripping back jacket approximately 1.25 inches (32mm) because strip lengths will vary depending on cable being used.

# Circuits	Max. exposed length Inches (mm)
2, 3, 4	.87 (22)
5, 6, 7	1.02 (26)
8, 9, 10	1.02 (26)
0, 5, 10	1.02 (20)

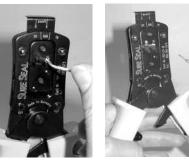

ure-Seal®

Sure Seal[®] Hand Crimp Tool Operation Instructions

The Sure Seal hand crimp tool has a full cycle ratchet controlled release and straight action crimp jaws. The flap locator makes it easy to load the terminal and the pre-positioner assures that the terminal is loaded for proper crimping. To open the tool, you must apply force to the handles to allow the tool to spring open.

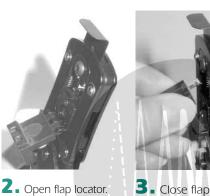

Open hand crimper by squeezing handles until handles spring open.

6 (Above, left) Insert stripped* wire into contact up to insulation stop.

7 (Above, right) Squeeze handles until they pop open. Remove contact from locator.

3 Close flap locator.

4. Press pre-positioner downward firmly for contact handles alignment. (crimp area should be facing upward).

				(3.0-3.3)

Tool Maintenance: Maintenance and inspection should be performed regularly. The tool should be wiped clean with special emphasis on crimping cavities. The tool may be cleaned by immersing in a suitable commercial solvent or cleaner that does not attack paints or plastic material. The tool should be re-lubricated after cleaning using a light film of a medium weight oil on bearing surfaces and pivot pins. When not in use, keep handles closed to prevent objects from becoming lodged in the crimping dies. Store in a clean dry area.

Power Sure-Seal[®] Machined Contact Crimp Tool

Insert contact up to stop.

Make sure contact is

inserted properly.

400BHD

The 400BHD is a pneumatically power heavy duty crimp tool designed for contacts that are too large to be crimped by hand tools. The 400BHD comes with a power unit and bench mounting bracket. The 400BHD is actuated with either the standard handle actuating switch or optional Pneumatic Foot Pedal (PFP). Crimp Die Kits are ordered separately (see **page 17**). It is highly recommended that you provide a sample of your wire when ordering these Crimp Die Kits. Your wire sample will be crimped and tested for proper crimp tensile strength.

Power Requirements: 90-125 PSI 1-2 CFM of dry, oil free, air **Operating Instructions:** (Call for operating instructions)

Semi/Automatic Crimp Tooling

Mini Applicator

For lease or purchase

M3000 Crimping Press

For lease or purchase

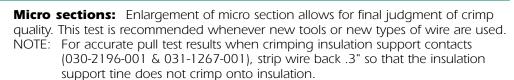

Crimp Inspection

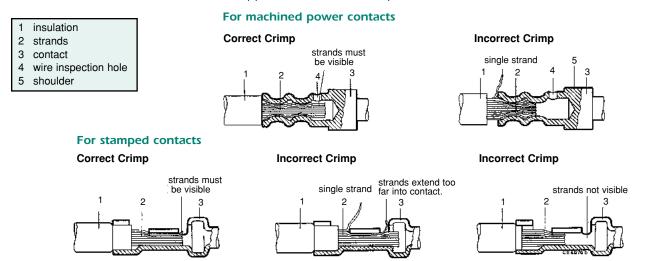

The Sure-Seal mini-applicator is designed for use in most common crimping presses and automatic wire processing systems. It utilizes a quick change mounting system, which allows the applicator to be installed or removed in two quick steps. This makes the change over from one applicator to another for crimping a variety of contacts utilizing the same press fast and easy. We offer this side-feed applicator for our most popular stamped and formed terminals (see below).

Applicator	Terminal
SSMA-SSI	110238-0195 & 110238-0194
SSMA-SS	110238-0040 & 110238-0085
MSSMA-SSI	121348-0100 & 121347-0100

The M3000 crimping press is compatible with most side-feed mini-applicators for automated terminal crimping and is the most economical "state-of-the-art" crimping press on the market. The M3000 accommodates our mini-applicator listed above as well as most "left-to-right" and "rear" quick change "mini" style applicators. Other features include precision crimp height adjustment, electronically interlocking safety guard, jog cycle and 110V power supply.

Crimp monitors and counters are also available. Call for more information.

Specifications subject to change.

Manual Insertion of Contacts

- **1.** Affix proper connector holding block to stable surface (i.e. vice or table). See Connector Selection table, **page 15**, for proper holding block.
- 2. If a jacket wire sealing boot is to be used, it must be slid up the cable (isopropyl alcohol will help in doing this).
- **3.** Dip connector in isopropyl alcohol and place in holding block with the back end up (wire side).
- 4. Using proper contact insertion tool, (see **page 15** Contact Selection table for proper tool):
 - А.
 - place contact in groove of tool make sure that end of the tool is up against В. the shoulder of the contact.
- 5. Insert contact into proper cavity of the connector body by applying constant pressure until contact snaps into place. Isopropyl alcohol will help in doing this. (Warning: Do not tilt the tool during the insertion).
- 6. Insert all remaining contacts. To insure environmental sealing of the connector any empty contact cavities must be filled with wire hole fillers (see Contact Selection table, **page 15**, for proper wire hole filler).
- 7. Check mating side of the connector to be sure that all contacts are on the same plane (fully inserted).
- 8. If you are using jacket sealing boot, slide the boot down the cable and onto the connector.
- 9. Remove connector and wire assembly from holding block.

Pneumatic Automatic Insertion Tool (Leased)

CBIT-SS-150

For lease only

The CBIT-SS-150 Sure-Seal® insertion machine is pneumatically powered, and microprocessor controlled. It is designed to insert pre-crimped wires into the standard Sure-Seal® plug and receptacle housings for moderate to high volume applications. This machine is used for SS2P/R through SS10P/R including the 120-1873-007 and 120-1874-007 rectangular style Sure-Seal® connectors.

The benefits of using this insertion machine are:

Ease of operation	Short operator training time
	Reduces operator fatigue and insertion errors
	Quick change over for different connectors sizes
Low cycle time	Much faster than manual insertion
 High connector integrity 	Lower chance of damaging the wire sealing ripples

Power Requirements:

Electrical = 115 Vac, 60 Hz Pneumatic = 80 PSI, 10 CFM dry oil free filtered air

Extraction of Contacts

- **1.** Slide up any rear accessories (i.e. jacket cable sealing boots). Using isopropyl alcohol will help you slide these up your cable.
- 2. Grasp individual wire firmly and gently pull the contact out of the connector.

* Extraction tool available DRK32 & DRK152, please call.

Sure-Seal[®] Circular Connectors

Typical: Power Sure-Seal[®], Flange Sure-Seal[®], and Mini Sure-Seal[®] are essentially the same except for mechanical and amperage capacity differences. Sure-Seal[®] products are designed to meet specification CS-155. Items of most general interest to users and designers are listed below. With its current capability and large size, Power Sure-Seal[®] contacts and currents are covered in CS-169.

Caution: "Sure-Seal® connectors are rated for use between temperatures of -40 to + 105 degrees Celsius. However, if a Sure-Seal® connector is exposed for long periods of time to temperatures exceeding 85 degrees Celsius and is unmated, it may lose its environmental sealing integrity upon remating. Thus, we recommend that both the plug and receptacle be replaced if environmental sealing is required after remating."
